

Antofagasta(Chile), 25 January 2016

To whom it may concern,

In 2014 we purchased a Laurini "Vulcano 2.0" Padding Machine, which has been working perfectly on the EWS - Escondida Water Supply Project in Chile. We are very satisfied with the overall performance of this equipment, whose perfect functionality has guaranteed us a high average daily output, meeting our expectations. Without any doubt we would certainly recommend this machine to anyone looking for quality padding equipment.

Best regards,
