To whom it may concern

In 2016 we have purchased 3ea Laurini “Selfloading Superpadder (with extra-long conveyor belt)” Padding Machine which have been used on TANAP-Trans Anatolian Natural Gas Pipeline Project lot. 3 (Total length 513Km – Pipe Diameter 56”) in Turkey.

We are very satisfied with the overall performance of the equipment, whose efficiency has guaranteed a high average daily production, meeting our expectations.

We would certainly recommend this machine to anyone looking for quality padding equipment.

Best regards,

Eng. Mustafa Şahin Kopuz  
Project Manager and Vice President of Tekfen Construction
