SansOne 70

SansOne 70 is our intermediate size machine and is characterized by an undercarriage variable gauge, to facilitate transport and guarantee superior stability to all other machines of the same size. The seat rotates together with all the controls positioned on the armrests and allows the operator to work without having to turn his neck.

The machine is equipped with ROPS protection, in which a closed cab with wide visibility, with heating and air conditioning can be mounted. The integrated anti-tipping system processes the position of the counterweight, adapting the relative lifting capacity, showed on a 12" display.
